

Euraplan are delighted to announce the launch of their new ASP solution

The ASP (Application Service Provider) solution will allow clients to access Euraplan's pensions accounting and investment software through their web browser. This dedicated hosting solution means that Euraplan will manage the complete process of installing, implementing and maintaining the software whether it be OpenAIR Investments, OpenAIR Accounts or Shareholder II for Windows (or any other non-Euraplan application) thus providing a cost-effective alternative to hosting at the client site.

The main advantages to the ASP solution are as follows:

- Euraplan operates and maintains the servers that support the software
- Software integration issues are eliminated from the client site
- Software upgrades provided automatically
- Secure access to client data

This exciting new ASP solution removes all of the problematic issues that can occur when implementing new software. The ASP solution can be easily set-up by Euraplan leaving the user able to simply and securely access their data from their normal web browser and all this without any additional or hidden costs. If you were looking for a hassle-free and maintenance-free solution then the ASP solution is the one for you.

If you are interested in this service please call 020-3146-8773 and request to speak to Stewart Carter, or email sales@euraplan.co.uk.
